Delivering “Good News”, Arctic Condensing Boiler Cuts Fuel Bill Nearly in Half for Seven Mile Road Church

Seven Mile Road Church is singing its praises in more ways than one after a very successful installation of our Arctic 1000 MBH input condensing boiler last year. Comparing their fuel bills over the past 12 months, the church saved 43% on natural gas costs.

The Seven Mile Road Church is a gospel-centered, missional church with people from lots of different backgrounds that serves its members and community in the greater Philadelphia area. Last year, the church was seeking for a more efficient and long-term heating solution to their existing boiler system. They had many choices when it came to higher efficient condensing products, but none offered the assurance of longevity as did the Arctic. With a time-tested and proven heat exchanger design, along with a 10-year warranty that carries a lifetime guarantee against thermal shock and pressure vessel leaks, the Arctic was the answer to their prayers.

Robin Cherian, congregation member, stated “Thermal Solutions’ Arctic Condensing Boiler is a true, commercially-built product. It proved itself during last year’s harsh winter conditions by providing our church reliable heating comfort with significant fuel savings that helped fund other areas of our ministry. We are really happy with the results of using the Arctic boiler.”
